## 7.7 Extensions to Maximum-Flow Problem

---

## Multiple sources and sinks

**Def.** Given a digraph  $G = (V, E)$  with edge capacities  $c(e) \geq 0$  and multiple source nodes and multiple sink nodes, find max flow that can be sent from the source nodes to the sink nodes.

flow network G

## Multiple sources and sinks: max-flow formulation

- Add a new source node  $s$  and sink node  $t$ .
- For each original source node  $s_i$  add edge  $(s, s_i)$  with capacity  $\infty$ .
- For each original sink node  $t_j$ , add edge  $(t_j, t)$  with capacity  $\infty$ .

**Claim.** 1-1 correspondence between flows in  $G$  and  $G'$ .

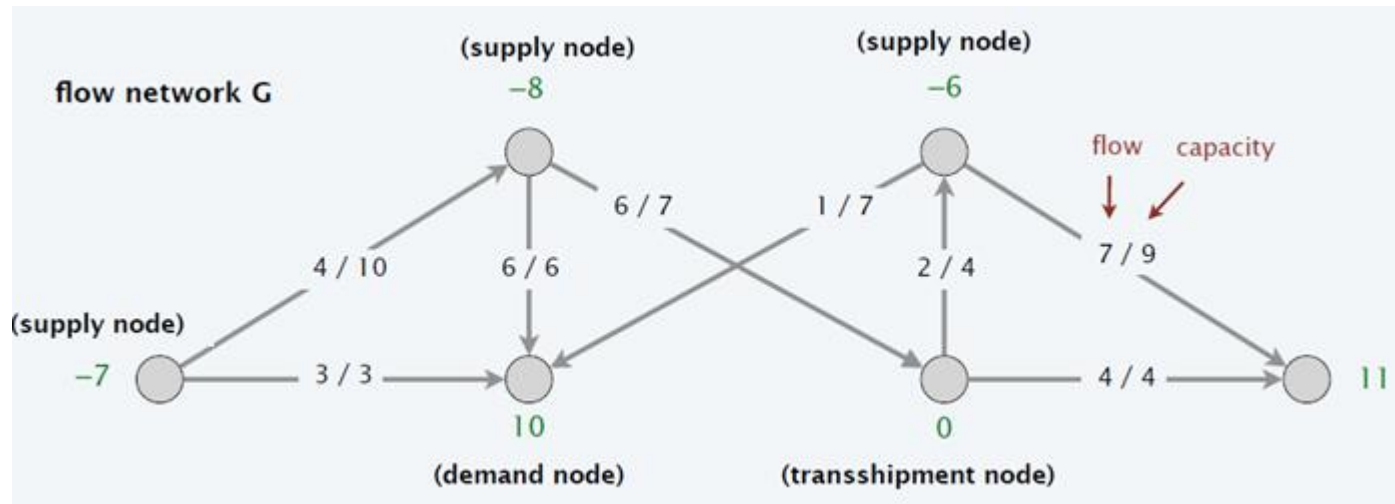

# Circulation with supplies and demands

**Def.** Given a digraph  $G = (V, E)$  with edge capacities  $c(e) \geq 0$  and node demands  $d(v)$ , a **circulation** is a function  $f(e)$  that satisfies:

For each  $e \in E$ :  $0 \leq f(e) \leq c(e)$  (capacity)

For each  $v \in V$ :  $\sum_{e \text{ in to } v} f(e) - \sum_{e \text{ out of } v} f(e) = d(v)$  (flow conservation)

# Circulation with supplies and demands: max-flow formulation

- Add new source  $s$  and sink  $t$ .
- For each  $v$  with  $d(v) < 0$ , add edge  $(s, v)$  with capacity  $-d(v)$ .
- For each  $v$  with  $d(v) > 0$ , add edge  $(v, t)$  with capacity  $d(v)$ .

**Claim.**  $G$  has circulation iff  $G'$  has max flow of value  $D = \sum_{v: d(v) > 0} d(v) = \sum_{v: d(v) < 0} -d(v)$

↑  
saturates all edges  
leaving  $s$   
and entering  $t$

# Circulation with supplies and demands

**Integrality theorem.** If all capacities and demands are integers, and there exists a circulation, then there exists one that is integer-valued.

**Pf.** Follows from max-flow formulation + integrality theorem for max flow.

**Theorem.** Given  $(V, E, c, d)$ , there does **not** exist a circulation iff there exists a node partition  $(A, B)$  such that  $\sum_{v \in B} d(v) > \text{cap}(A, B)$ .

**Pf sketch.** Look at min cut in  $G'$ .

demand by nodes in  $B$  exceeds  
supply of nodes in  $B$  plus  
max capacity of edges going from  $A$  to  $B$

Previous slide:  $G$  has circulation iff  $G'$  has max flow of value  $\Rightarrow$  max flow  $\Rightarrow$  min cut
